

We offer a

Grassland Subsoiling

Service.

“Grass must have Oxygen to live”

“Ideal soil structure should be 25% air”

Why subsoil grassland?

- Alleviate structural compaction in the rooting zone
- Improved root development
- Release locked in nutrients
- Improved land drainage
- Increased bacterial activity

“SUBSOILING
COSTS LESS
THAN 5% OF
INPUTS”

“For cost comparisons please visit our website.”

www.duttonagriservices.co.uk

Our service.

We offer a grassland subsoiling service using a 5 leg auto reset SUMO GLS which gives deep even aeration whilst still leaving a consolidated level surface.

Air is a **FREE** but vital resource for grassland production and good soil structure is the key to its availability.

“Repair poached and machinery compacted land making effective use of high cost inputs & bringing long term benefits”
